

CARAVAN HOLIDAY PARK GOES WIMAX

July 2009

Wicoms uses Wimax to provide Broadband to Coastfields Grange Park

FWA Solutions and Wicoms are pleased to announce that a broadband internet service is now available at Coastfields Grangepark Leisure site near Skegness. FWA Solutions provided state of the art technology to build a Wimax Network that covered the park enabling Wicoms to provide wireless hotspot access.

Wimax provides longer range coverage than WiFi and can deliver high speed broadband connections with full Quality of Service. Visitors or residents can purchase a variety of affordable passes to allow them to gain access to the high quality Internet service. There are also plans to launch a VOIP phone service over the network in the near future.

FWA Solutions recommended and supplied the new Wimax technology. Managing Director, David Penny, explained "When you have large areas to cover, conventional WiFi technologies can fail to deliver the speed and coverage that users expect. We use a Wimax to boost the range of WiFi access to provide both the coverage and the ease of connection that people want from a modern network."

Simon Davies, CTO for Wicoms added "we chose the Wimax backhaul technology based on it's flexibility and speed of deployment and ultimately the price point per WiFi access point when compared with the other technologies we considered. Customers are very pleased with both the speed and services that we are able to deliver over the Wimax network, with a great deal of future expansion possibilities making the business case very compelling".
